HPL (mass color)

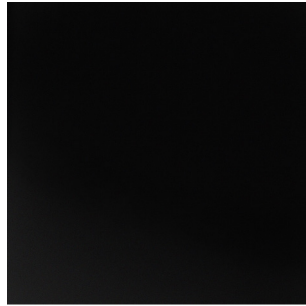

High pressure laminate (HPL) in thickness 4", is composed of several layers of papersoaked in thermosetting resin and compacted in a heating- and high pressurizing process. The result is a stable product with physical and chemical characteristics that are very different from the elements used to make it. Due to the high temperature and pressure treatment in the production process, HPL is an extremely strong material: resistant to scratches, hits, abrasions, chemicals and heat.

BASE

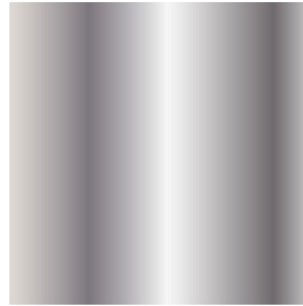

Metal

Matt painted white (X053)

Matt painted graphite grey (X053)

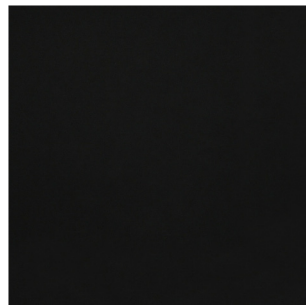

Chrome-plated

OPTIONAL PADDED PAD

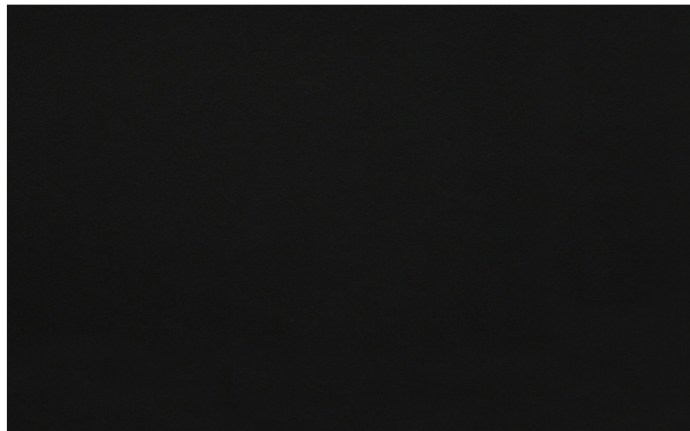

FABRIC > CAT. F > Londra collection

White R058

Black R061

Composition: technical fabric - 100% polyurethane backing 100% polyester

Height: 137 cm

Weight: 620 g/lm

Light Fastness: 5/6

Fire Resistance: NFPA 260 Cover fabric/NFPA 101 - California TB 117-2013

Cleaning: Clean with a dry or damp cloth
