

Robin

Description

Suspension Lamp

What floats inside this finely designed, well finished and apparently light metal cage, is not a red robin but a great-ridged glass element lit by the LED light source at its base, concealed in a white opaque base, which is also lit. A plexiglass panel, whose polished edges light-up by refraction, separates the two glass components and helps in diffusing the LED-generated light, with a total of 20W, that guarantee excellent lighting power with a decidedly contained consumption. The metal flanges can be in glossy chrome or in the new satin-finished bronze.

It is available in two sizes.

LED included.
