

HCB

Design: Patrizia Bertolini

Description

The elegant HCB coat stand comes made of solid water-stained beech wood elements. The joint pattern is the hallmark of HCB, an elegant solid beech hanger. The overall design, basic and linear, is composed of three orthogonal pairs of elements: three columns and the same number of short cylinders, arranged in a nearly horizontal position, because the slight incline ensures the mutual interweaving and balance of the parts.

Finishes & Materials

Structure: Wood.
