

## Moorea

*Design: Carlo Colombo*

### *Description*

Dining table available with square and rectangular top, designed with an extremely high standard of materials for outdoor use, to meet different contexts. The entire structure is made of AISI 316L Pewter painted stainless steel, chosen to guarantee a particular resistance to corrosion in different environments, thanks to the composition of the main alloy elements. In order to ensure reliability, the mechanical fasteners between the parts are also made of stainless steel. The structure design has been developed with specific drain holes to ensure a better water draining system.

The legs are made of solid Teak wood elements in a natural finish, a highly esteemed wood for its technical and aesthetic qualities. The top, divided into sections according to a golden ratio, is composed of slabs of lava stone from Etna, of different sections. The lava stone from Etna is heat-treated, to improve the technical characteristics and achieve a warm grey coloring. A pre-selection of slabs is sprinkled with colored glass powder available in three variants: pearl, teal, emerald, which partially fills the pores that characterize the first layers of Etna lava stone. The glass powder melts and creates inclusions that characterize and enrich the stone itself. Covering is recommended in case of rain. Made in Italy.
