

Fresnel

Design: Joe Colombo

Description

Fresnel, available as a wall/ceiling lamp was conceived as one of those perfect objects shaped by time—an icon where essentiality and practicality become synonyms of elegance. With its pure, timeless design, it embodies Colombo's vision of merging functionality with refined aesthetics, making it a true designer light fixture. At the heart of the project lies the Fresnel lens, the undisputed protagonist. The discreet metal body completes the structure with quiet strength, serving as a practical support that avoids unnecessary ornamentation. The result is a luxury lighting fixture that showcases functional beauty, simplicity, and modern sophistication—a small masterpiece that continues to stand out in the world of luxury designer lighting. The E12 version is supplied in sets of 4 lamps, while the LED version is available in sets of 2. Made in Italy.
