

Kin

Design: Francesco Rota

Description

A cast aluminum body with a LED core are the distinctive structural elements that define Kin, masterfully designed by Francesco Rota as a suspension lamp of explicit yet refined beauty. Its flared form, with remarkably slim thicknesses, is completed by a methacrylate disc that diffuses the light with precision and softness.

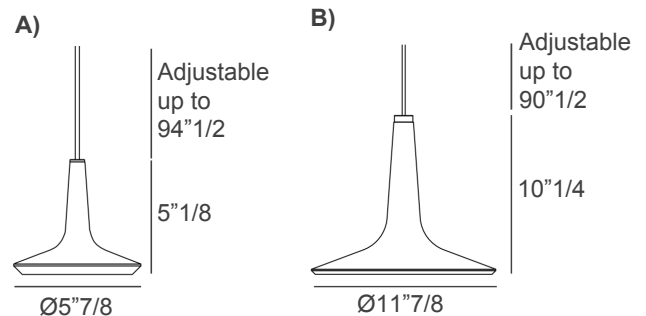

Available in two sizes and in elegant finishes, Kin embodies the perfect balance between functionality and sophistication. This piece of designer lighting stands out as both a decorative and functional presence, offering versatility that makes it suitable for a wide range of domestic interiors as well as an infinite variety of contract settings. With its luxury lighting design and contemporary light fixture character, Kin becomes not only a source of illumination but also a statement piece, seamlessly integrating into refined spaces while elevating their atmosphere.

Made in Italy.
