

Superluna

Design: Victor Vasilev

Description

Superluna is a collection of luxury lighting fixtures inspired by a personal reflection on Vico Magistretti's work and his mastery in shaping iconic forms to enhance the power of light. With the revolution brought by LED technology, which allows luminaires to be reinvented from their very source, Vasilev created a family of lamps designed to give a magical aura to an extremely technical light. A slender metal rod conceals the electrical components, becoming the elegant support for the luminous core. The LED emerges seamlessly from the stem, aligned with a semi-spherical reflector that rotates around its axis to diffuse the light. This designer lighting concept not only celebrates minimalism but also evokes the celestial movement of the planets, transforming light into a poetic experience. With its refined proportions, clean geometry, and exclusive finishes, Superluna embodies the essence of luxury designer lighting—a balance between innovation and elegance. It is a striking example of high-end contemporary lighting design, capable of enriching both private interiors and sophisticated contract environments with timeless beauty. Made in Italy.

Dimensions

Ø11" x 17"H - Cod. 297

Light source: 1 x max 6,5W (LED) 3000°K - 650 lm CRI>85 - With bulb

Finishes & Materials

Structure: Metal with rotating hemisphere.
