

NOHRD Citius

Description

The NOHRD Citius is a motorized slat-belt treadmill designed to meet the highest standards in design, engineering, and comfort. Manufactured entirely in Germany, it combines innovative materials with advanced drive technology and a unique slat design. With finely adjustable speed increments of just 0.6 mp/h (0.1 km/h), ranging from gentle rehabilitation sessions to high-intensity sprints up to 18.6 mp/h (30 km/h), Citius delivers precise, safe, and efficient training.

Where many premium treadmills offer either high speeds or incline functions, the Citius combines both. Its ultra-fine speed increments and energy-efficient performance make it precise, quiet, and sustainable, setting a new benchmark in treadmill training.
