

Amisol

Design: Daniel Rybakken

Description

Amisol is a striking suspension lamp that commands space with minimal physical volume, creating a dramatic yet weightless visual presence. A translucent white film or metallized mirror membrane is stretched across a circular aluminum frame, forming a large floating disk that diffuses or reflects an intense beam of light, much like a contemporary solar sail.

An advanced light source projects onto the membrane, producing either gentle, ambient illumination or a sharp, reflective glow, depending on the chosen finish. Thin structural rods connect the lamp's key elements, while adjustable suspension wires allow the disk to rotate freely and position at any angle, offering complete control over the lamp's orientation and visual effect. Crafted with an elegant light grey aluminum body and a refined polycarbonate disk, Amisol is ideal for those seeking designer pendant lighting, modern sculptural lamps, and architectural statement fixtures. Made in Italy.

Light Source:

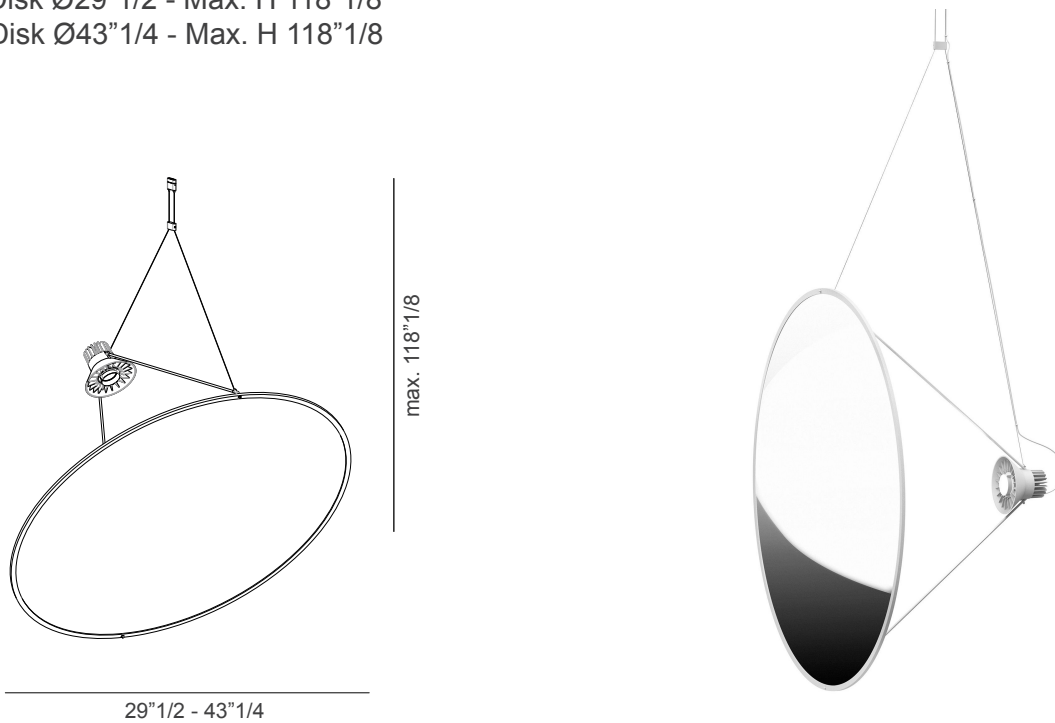

LED 52W 3000K CRI 90. Dimmable 0-10V. UL Approved.
