

Counterbalance

Design: Daniel Rybakken

Description

A sophisticated lighting masterpiece that appears to defy gravity. With its striking minimalist form and sculptural presence, this modern LED wall lamp seems to float effortlessly in space, evoking the dynamic equilibrium of a contemporary mobile. At the core of its innovation lies a precision-engineered balancing system. Using finely crafted gear wheels, the integrated counterweight compensates for the motion of the long adjustable arm, ensuring perfect stability of the diffuser in any position. This fluid movement allows the lamp to be positioned exactly where light is needed, providing both functional versatility and architectural elegance. Crafted in matte black painted steel and finished with a sleek aluminum head, it brings a refined, luxurious aesthetic to any interior. Its fully adjustable head, capable of directing light in any direction, makes it ideal for reading areas, workspaces, living rooms, and sophisticated design environments. Made in Italy.
