

Osmose Round Table

Design: Patrick Jouin

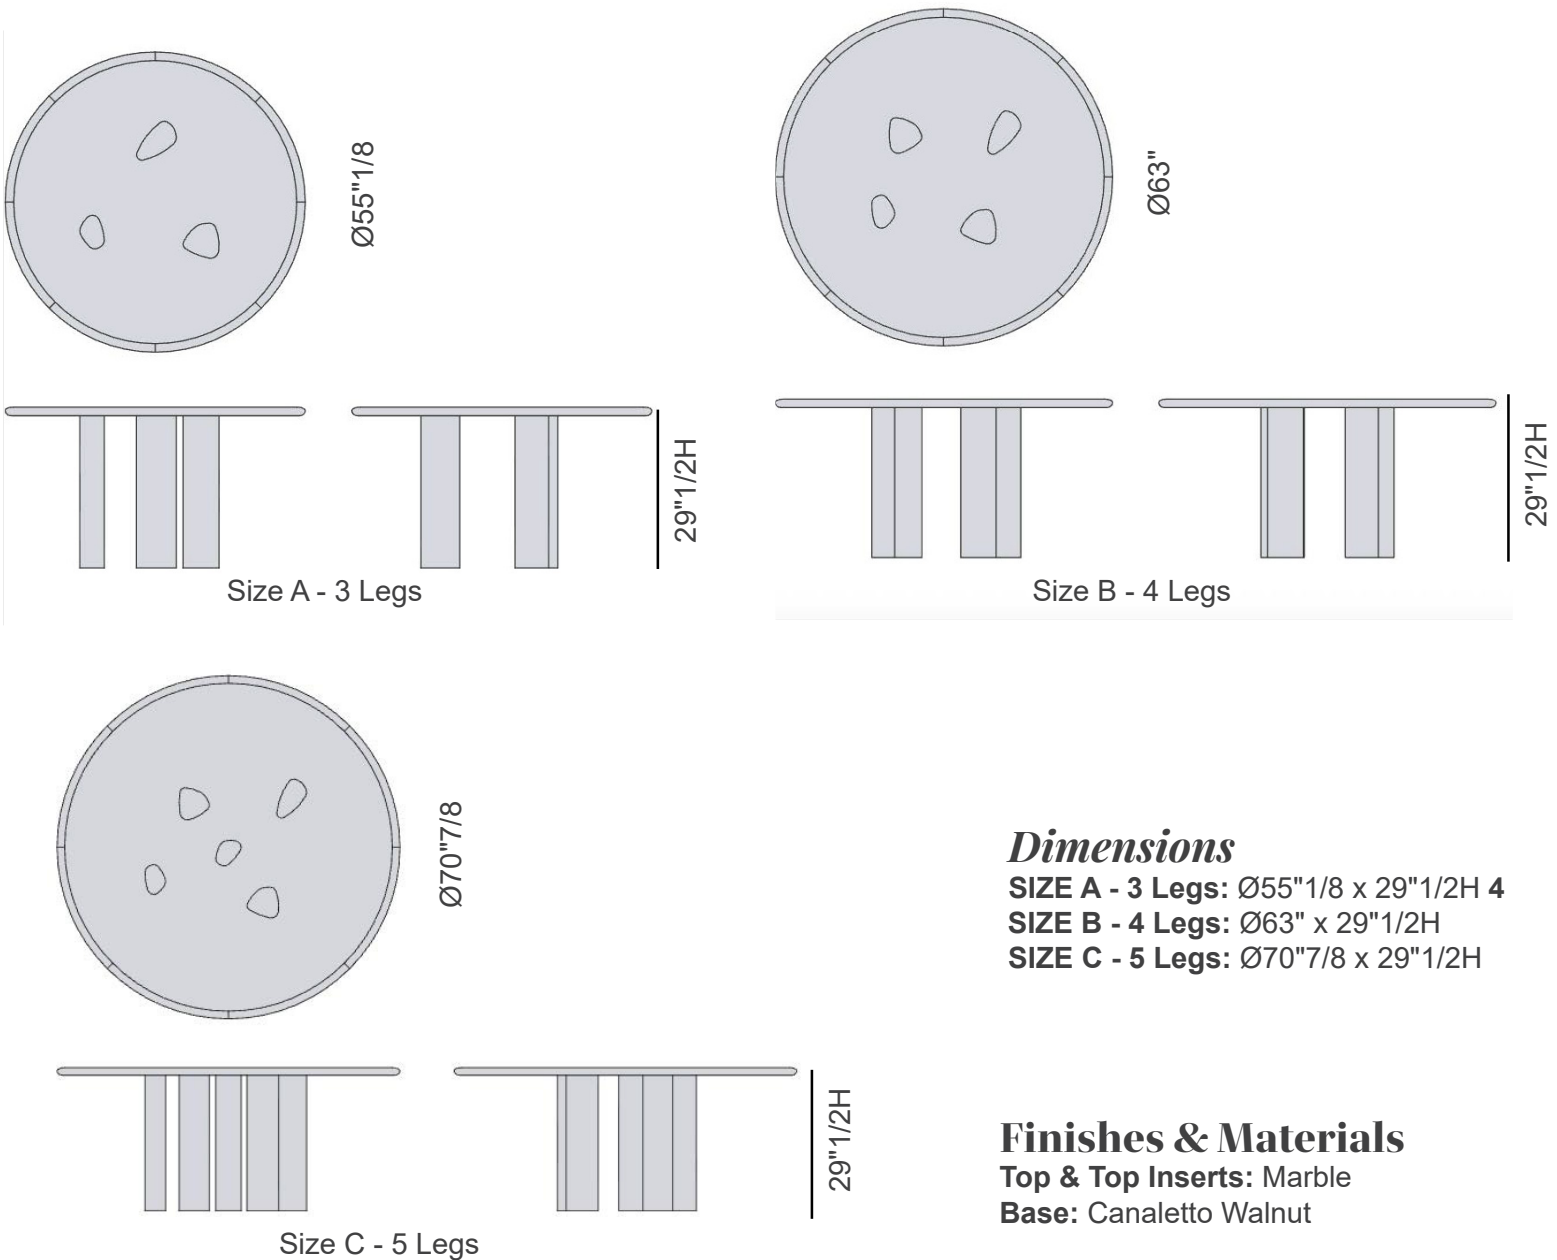

Description

Osmose introduces marble legs to the Porada dining table collection for the first time and is offered in both rectangular and round shapes. The table is made entirely of canaletto walnut, featuring solid wood contoured edges on the long sides of the rectangular version and around the full perimeter of the round one. The position of the marble legs varies based on the table's form and size, giving each configuration a natural, spontaneous presence. The name Osmose refers to the idea of exchange and connection between the materials, resulting in a refined and distinctive expression. The round version features a marble top supported by solid canaletto walnut legs, with wooden inserts placed above the legs in a matching finish to create a unified visual effect. Made in Italy.
