

Concrete

Design: Signarotto+Partners

Description

Concrete is a sculptural cupboard defined by a strong architectural identity and an unmistakably contemporary aesthetic. Its presence is immediately striking, thanks to the refined craftsmanship that shapes every surface. The design is the result of an in-depth creative process, where precise excavations, angled cuts, and carefully calibrated inclinations give the piece its distinctive and expressive character.

The visual centerpiece of the Concrete cupboard is its pantographed and faceted four-door front, conceived almost as an origami composition. Each door presents a unique play of volumes and reflections, creating a dynamic rhythm that changes with light and perspective. This meticulous workmanship transforms the surface into a living geometry, combining artistic depth with a refined sense of balance and elegance.

Behind the four hinged doors, the cupboard reveals a generous and well-organized interior, accessed through a discreet push-pull opening system. Shelves and dividers define spacious compartments designed to accommodate everyday storage needs, including bottles, while preserving a clean and orderly interior layout. Bold yet sophisticated, the Concrete cupboard enhances contemporary living environments with sculptural presence, functional intelligence, and a strong design statement. Made in Italy.

Finishes & Materials

Structure: CARB-02 certified wood particle board panels. Interior in Textured finish with wooden shelves and partitions.

Fronts: Pantographed and faceted doors made of MDF with Up Surfaces or Matt Lacquered finishes.

Lama Base: Metal or Matt Lacquered finishes.
