

Concrete

Design: Signarotto+Partners

Description

Concrete is a sculptural and contemporary sideboard distinguished by its strong architectural presence and refined craftsmanship. Its modern character is expressed through the faceted doors, the result of an in-depth design process and meticulous execution involving precise excavations, angled cuts, and carefully studied inclinations. Every detail contributes to a bold yet sophisticated aesthetic that defines the piece.

The true focal point of the Concrete sideboard lies in its pantographed and faceted doors, conceived almost like an origami composition. Through expert workmanship, these surfaces come to life with a dynamic play of volumes and reflections, creating subtle movements that vary from one door to another. This refined complexity gives the sideboard a unique visual rhythm while maintaining a balanced and elegant appearance.

Available in different sizes to suit a variety of interior needs, Concrete can be configured with two, three, or four hinged doors featuring a discreet push-pull opening system. A light touch reveals the internal storage, organized with shelves and dividers that create generously sized compartments, also ideal for storing bottles. Functional, expressive, and visually striking, the Cement sideboard is designed to enrich contemporary living spaces with character, design depth, and practical versatility. Made in Italy.
