

Eiffel

Design: Signorotto + Partners

Description

The Eiffel console is a statement piece defined by its striking metal frame, capable of furnishing a space on its own with an elegant yet slender presence. Its refined silhouette combines structural strength with visual lightness, making it an expressive addition to contemporary interiors.

The base is composed of sculptural metal blades that converge gracefully at the center, creating a dynamic and architectural support for the oval top. This distinctive structure enhances both stability and aesthetic impact. The oval top is available in wood with a precise 30° sloping perimeter edge, as well as in lacquered glass or stoneware, offering a range of material expressions from warm and tactile to sleek and refined.

With its balanced proportions and carefully considered materials, the Eiffel console brings a strong yet welcoming character to the room in which it is placed. Elegant, versatile, and visually impactful, it is designed for living spaces that value design presence, material quality, and timeless sophistication.

Made in Italy.
