Wet Environments

AQUABOUT WET SYSTEM™

Technical wall covering for wet and damp environments.

AQUABOUT WET SYSTEM™ is the patented waterproof wallcovering dedicated to bathrooms, showers, kitchens, swimming pool areas, spas and any wet environment.

Totally impermeable to water, it has excellent resistance to yellowing, detergents and sanitizing products, even in medical environments. Wall&decò brought to market this revolutionary waterproof wallpaper in 2013, and still today – with more than 24,000 installations in over 81 countries – it proves to be the most performing and reliable product in its category.

AQUABOUT WET SYSTEM™ is a true wall covering system, consisting of various components, such as primer, specific glue, fiberglass fabric and protective finish, with a total thickness of only 1/16 in.: this allows a fast renovation with limited site residues on pre-existing surfaces, such as bathroom and kitchen tiles, relying on an agile installation process. The water-based resins, combined with the solvent free inks, ensure a lower environmental impact - a high-performance and sustainable solution for residential, hospitality and commercial spaces.

Thanks to constant updates and improvements, AQUABOUT WET SYSTEM™ has been awarded the prestigious Red Dot Design Award 2025 in the Materials and Surfaces Design category, highlighting its innovative approach.

Intended use:

Bathrooms and shower

AQUABOUT WET SYSTEM™ enriches the bathroom environment with an innovative decor solution, capable of creating continuous graphic surfaces between the inside and outside of the shower: a visual unicum that amplifies space and ensures a high aesthetic harmony.

Kitchen and backsplash

Thanks to its high washability and fire resistance, AQUABOUT WET SYSTEM™ is a perfect solution for all kitchen walls including the back-splash area.

Spa & Gym

Wellness centres, gym and pool areas discover an unprecedented enhancement, becoming spaces with a unique and highly customizable decorative value.

Materials

Features

- . Impermeability: ensures complete water resistance.
- . Durability: offers remarkable resistance to cracks, bumps, scratches.
- . Fire resistance: EN13501 Class B s1 d0 – ASTM E84 USA Class A.
- . Washability: resists to detergents and sanitising products, even in medical environments.
- . Sustainability: water-based resins. Printing technology with water-based and solvent-free inks.
- . Overall thickness: 1/16 in.
- . Customizable: size, colors and graphics.
- . Product warranty: 5 years.

Patent Pending

Resistance to knocks

Extra washable

Resistant to detergents and sanitisers

Waterproof
