

Doi

Design: Meneghello Paoletti

Description

The DOI suspension lamp is a contemporary pendant lighting system designed to create balance, movement, and visual tension within modern interiors. Conceived as a modular suspension solution, DOI features one or more lighting elements suspended from the ceiling by a steel cable, allowing each component to float freely in space until its natural weight defines its final position. The result is a dynamic yet stable composition that enhances residential and commercial spaces with architectural lighting impact. The system is composed of two essential elements: a ceiling-mounted disk and a precision spotlight crafted in extruded aluminum. The disk functions as a counterweight and draws the spotlight toward it through the tension of the cable, creating a refined equilibrium. The adjustable ceiling attachment, separated from the power plate, allows the light source to shift away from the electrical outlet position, offering greater flexibility in lighting design and installation planning.

Available in white, matte black, and brushed brass finishes, the white version features a distinctive knurled texture that adds depth and tactile character to the surface. Ideal for dining areas, living rooms, offices, and hospitality environments, DOI combines sculptural form with functional LED illumination, delivering both decorative appeal and targeted lighting performance. Made in Italy.

Dimmable | UL Certified

Electrical safety device with additional protective wire (earth) connected to metal structure of lamp.

Device with protection against electric shock based on very low voltage supply. No higher voltages are produced.
