

Batis Coffee Table

Design: Andrea Casati

Description

The contemporary Batis Coffee Table features an extensible design with three glass or ceramic tops, animated by an innovative double synchronized mechanism that allows all three elements to open simultaneously with a simple gesture. The tops can be arranged in different directions, creating a dynamic composition that adapts to changing spatial needs. The supports, available in painted or chromed steel, give the table a precise and modern architectural character, balancing movement with structural clarity.
