

## Alma Multipla

### *Description*

Alma Multipla transforms light into a refined architectural composition, where sculptural glass elements align in a harmonious sequence. The interplay between blown glass and pleated fabric diffusers creates a continuous luminous rhythm, delivering both visual lightness and strong design identity. The linear arrangement enhances spatial perception, generating a welcoming atmosphere while maintaining a clean, architectural presence. The composition is supported by two steel cables to ensure optimal balance and precise alignment. An optional extended cable is also available, providing flexibility for various ceiling heights and installation requirements. With its sculptural continuity and refined engineering, Alma Multipla integrates seamlessly into sophisticated environments, standing out among curated designer light fixtures that combine innovation, elegance, and timeless appeal. Alma Multipla uses a strip LED module custom made for the lamp's internal geometry.

Made in Italy.

**Light source:** 1 x 80W - Custom LED Strip - 10912 Lm - 2700 K - CRI: >90 - TRIAC dimmer

### *Finishes & Materials*

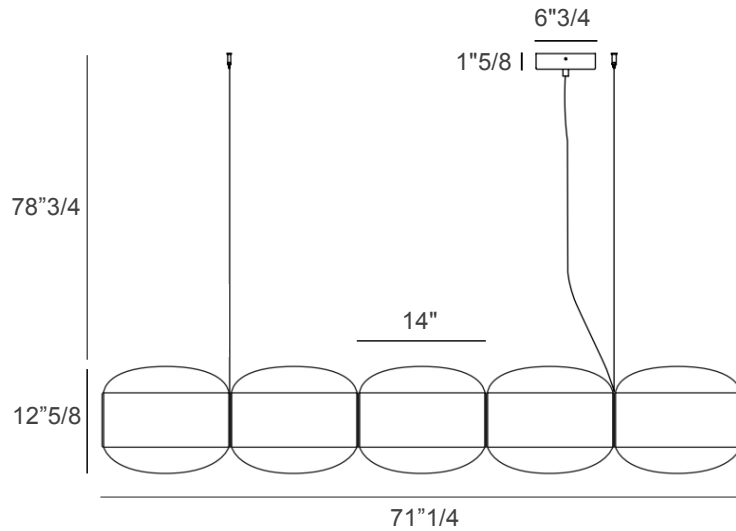

**Internal Diffuser:** Pleated Fabric.

**External Diffuser:** Blown Glass.
