

Bilbao Glass

Design: Cattelan Italia

Description

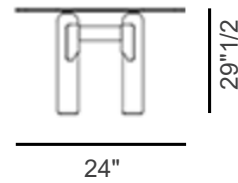

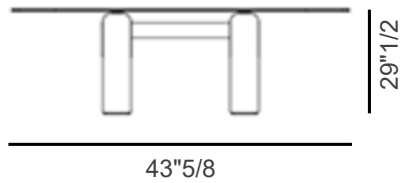

The Bilbao Glass Table introduces a distinctive architectural presence inspired by Brutalist design principles. Its sculptural base is composed of four crescent-shaped cement pillars connected by a metal cross-brace, creating a striking balance between solidity and visual lightness.

Developed with sustainability in mind, Bilbao is produced using a cold-moulding cement technique that allows complete recyclability while reducing the environmental impact of the manufacturing process. The handcrafted pouring and finishing stages ensure that each table is unique, with natural air bubbles in the cement surface highlighting its artisanal character.

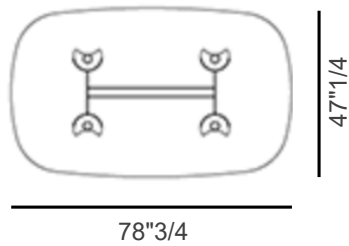

The transparent glass top showcases the full complexity of the base, revealing the refined connection points and structural details beneath. Available with clear, extra-clear, bevelled, reverse-bevelled, or textured glass tops, Bilbao combines contemporary design, sustainable craftsmanship, and innovative materials in a statement dining table designed for modern interiors. Made in Italy.
