

AIR-ALP0177 Ceiling Lamp

By Arteinmotion - Aeronautical Collection

Description

The Transitional AIR-ALP0177 Ceiling Lamp is crafted from an original 1973 Alpha Jet fuel tank, carefully reworked into a bold piece of sculptural lighting. The front and rear sections are seamlessly joined to preserve the tank's authentic aerodynamic silhouette, while the mirror-polished finish reflects both light and surrounding space for a distinctive, futuristic effect. Designed as an upcycled statement piece, the AIR-ALP0177 is especially suited to loft-style interiors and luxury homes with high ceilings, where its scale and form can be fully appreciated. Four directional spotlights provide flexible illumination, while remote-controlled dimming allows the brightness to be adjusted for different moods and settings. Made in Italy.
