

AIR-DECo174 Wall Decoration

By Arteinmotion - Aeronautical Collection

Description

The Transitional AIR-DECo174 Wall Decoration is crafted from an original front engine cowling of an Airbus A-310, reimagining an authentic aviation component as a striking and versatile wall-mounted feature. Its mirror-polished finish enhances the sculptural quality of the circular structure, bringing a refined industrial presence to the surrounding space. Designed as a multimedia center, the interior can be configured to accommodate a television or modular arrangements for media devices, players, and decorative objects. The circular form creates a dramatic framing effect, emphasizing whatever is displayed within. Finish, dimensions, and interior layout can be customized to suit different residential, executive, lounge, or aviation-themed environments. Made in Italy.
