

AIR-ELI0129 Wall Propeller

By Arteinmotion - Aeronautical Collection

Description

The Transitional AIR-ELI0129 Wall Propeller is an original four-blade wooden propeller associated with a Royal Aircraft Factory F.E.2.B. dating from 1917. Preserved in its original finish, the piece showcases the distinctive form, materials, and craftsmanship of early aviation engineering. Polished brass details accent the natural wood and reinforce the propeller's historic character, while its large four-blade configuration creates a strong sculptural presence when displayed on a wall. Described as being in perfect condition, the AIR-ELI0129 offers an authentic connection to early aircraft design while serving as a dramatic decorative centerpiece. Made in Italy.
