

AIR-FUS0200 Bar Shelving

By Arteinmotion - Aeronautical

Description

The Transitional AIR-FUS0200 Bar Shelving is crafted from an original ATR aircraft fuselage section, reimagining authentic aeronautical construction as a functional bar display. The fuselage retains its recognizable curved form and five original window openings, preserving the character of the aircraft structure. Each window is converted into a leather-covered bottle display niche and illuminated with RGB spotlights. A mirror-polished finish enhances the reflective metal surface and emphasizes the fuselage's aviation heritage, creating a large-scale statement piece that combines authentic aircraft design with a contemporary display function. Made in Italy.

Finishes & Materials

Structure: Metal
