

AIR-LIB0173 Bookcase

By Arteinmotion - Aeronautical Collection

Description

The Transitional AIR-LIB0173 Bookcase is crafted from the original inlet engine cowling of an Airbus A-310, reimagined as a distinctive piece of functional furniture. Entirely made in Italy, it combines authentic aviation heritage with refined craftsmanship and a strong contemporary presence. The cowling features a brilliant mirror-polished finish that emphasizes its curved form and reflective surface, while the interior bookcase structure is built from tubular steel with open shelving. The result is a dramatic statement piece that brings together industrial engineering, sculptural design, and practical storage for luxury residential or commercial interiors. Made in Italy.
