

AIR-TAV0115 Wall Mounted Engine

By Arteinmotion - Aeronautical Collection

Description

The Transitional AIR-TAV0115 Wall Engine combines a section of a Continental radial engine with a full wooden propeller to create an impressive wall-mounted aviation display. The radial arrangement of the cylinders remains fully visible, highlighting the mechanical structure and distinctive character of the engine. Mirror-polished components are complemented by chromed and painted cylinders, while the natural wood propeller introduces a warm contrast to the metallic surfaces. The AIR-TAV0115 creates a substantial sculptural presence. Made in Italy.

Finishes & Materials

Base Engine: Metal

Fan: Wood
