

AIR-TAV0131 Wall Mounted Engine

By Arteinmotion - Aeronautical Collection

Description

The Transitional AIR-TAV0131 Wall Mounted Engine combines an authentic section of a Jacobs radial engine from the 1933–1970s period with a large wooden propeller, transforming genuine aviation components into a striking wall-mounted display. The engine is carefully restored with a mirror-polished finish and painted cylinders, preserving its distinctive mechanical details and historic character. The massive wooden propeller adds scale and visual impact while reinforcing the piece's strong aviation identity. Designed as a decorative statement, the AIR-TAV0131 brings together aircraft engineering, polished metal, and natural wood in a sculptural composition suited to collectors, aviation enthusiasts, and design-focused interiors. Made in Italy.

Finishes & Materials

Base Engine: Metal

Fan: Wood
