Description

Soda water is used to trap air in a super heated glass matrix, which is vertically stretched and folded back onto itself between pegs numerous times. As the glass cools, the folding motion along the grain of the loop turns the entrapped air into micro-filaments that give the piece a pearlescent optical quality. A low-voltage LED light source is introduced at one end of the loop casting light through the micro-filaments and registering a gentle gradient.

Longest and shortest lengths are determined by client, Bocci fabricates all lengths between these measurements. Specified shortest and longest lengths are from the underside of the canopy to the underside of the pendant. There may be variance of $\pm 1/8$ " on specified shortest and longest lengths. Up-charge applies for cable lengths over 118"1/8.

Pendant anchor kit, lamps and power supplies are included.

Lamp: 1W LED, 2700K, 100lm.

Materials: Blown glass, copper mesh, braided metal coaxial cable, electrical components, steel canopy.

Power Supply: Integral.

Environment: Indoor, dry location. IP30
