

Romano Coffee Table

By Apospersano for PRIMAR

Description

The Contemporary Romano Coffee Table, designed by Apospersano, interprets architectural geometry through a clean, sculptural silhouette. Its natural stone construction is complemented by refined metal details, creating a subtle interplay between solid material, light, and surface. The base is composed of overlapping semicylindrical forms that support a sharply defined tabletop, giving the piece a distinctive sense of proportion and balance. With its focus on geometry, material, and formal precision, Romano brings an elegant and contemporary architectural presence to the space. Made in Italy.
