

Montgomery

Design: Dainelli Studio

Description

Armchair with solid ash wood structure moulded in the raw material, characterized by its curves and complex joints, with an extreme attention to the seating comfort and resistance for long-lasting use. Seat and backrest cushions in polyurethane foam in different densities for maximum comfort and warmth, held together by stitching. A precious detail on the back of the backrest cushion hooks into the ash frame of the seat to ensure maximum stability. The armrests are covered in leather in the central part and are soft to the touch; the line of the armrest remains perfect, not deformed by the upholstery because the solid ash wood has a recess in which the soft part rests. A precious solid wood detail covers and conceals the joints. Made in Italy.
